

Forsee Power boosts the urban scooter with GO, its new range of batteries.

**Showcased at the EICMA motorcycle show in Milan between 6 and 11
November**

Paris, 6 November 2018 – Forsee Power, the expert in smart battery systems for urban mobility solutions, announces the market launch of three scooter batteries to support the accelerating growth of clean mobility in Europe and Asia.

Now that the increasing number of electric mobility options is a reality on our roads, the industry has had to adapt to these new consumer preferences by offering increasingly innovative products. It is against this background that Forsee Power has, for several years, been developing batteries that respond effectively to the many requirements of the scooter market in China and Europe, and the GO range of batteries are the latest in this process of continual development.

Developed entirely out of the expertise of Forsee Power's Smart Life division, the GO range is designed to provide electrical power not only for personal urban scooters, but also for fleets of delivery scooters. The range currently offers two batteries (GO 2 and GO 4), with a third (GO 1.6) currently in development ahead of production in the first quarter of 2019. This standard range delivers a rapid response to the precise voltage and current requirements set by customers.

“The launch of our new GO range consolidates our leadership in the electric scooter segment and provides us with opportunities for potential partnerships based on our ability to offer competitively priced and readily available batteries”, says Frédéric Baudrier, Head of the Smart Life Division.

Having been previewed at the Chinese scooter show in Tianjin this April, Forsee Power will be showcasing the GO range at the annual EICMA motorcycle show in Milan. You can discover all the Group's latest innovations on Stand Q12 in Pavilion 11 between 6 and 11 November.

About Forsee Power

Forsee Power is an industrial Group specializing in smart battery systems for electric transport (road, rail, marine) as well as portable and mobile equipment (scooter, medtech, robotics).

As a major commercial and industrial player in Europe, China and North America, the Group designs, assembles and supplies energy management systems based on the most robust cells on the market as well as provides installation, commissioning and on-site or remote maintenance. With its modular solutions,

Forsee Power guarantees that customers buying its batteries enjoy security, energy efficiency, thermal management, long-term reliability and long working life.

The Group also offers financing solutions (battery rental) through its participation in NEoT Capital and second life solutions for transport batteries.

In August 2018, the Group opened a new industrial site in Poitiers, France. This new site will enable Forsee Power to produce 2,500 bus batteries per year in 2019 and will employ over 300 people by 2021.
